FELIPE SANCHEZ MARTINEZ - AI Engineer

felipesanchezmart@gmail.com | linkedin.com/in/PhilipSanM | github.com/PhilipSanM | kaggle.com/PhilipSanM | [redacted] | philipsanm.github.io

WORK EXPERIENCE

Software Engineer L3 [redacted]
Core Widgets, [redacted] April 2025 - Present

- Rebuilt and scaled NLP-driven analytics and generative widgets (sentiment analysis, topic modeling, feedback summarization) powering insight extraction from large-scale experience data.
- **Designed and shipped full-stack features on a microservices** PaaS architecture, leading Angular → React + TypeScript migrations and deploying via Docker + CI/CD (Jenkins).
- Owned production reliability through **on-call rotations**, RCA, and automation; enforced high engineering standards via code reviews and scalable system design

PWBM Technology Intern [redacted]
Production Management SRE, [redacted] June 2024 - August 2024

- **Designed a Machine Learning System** to automate the revision and approval/rejection process for changes in production applications, through making Fine-tuning to Large Language Models (LLMs);
- **Studied theory and practices** of using **AI in enterprise** settings and **MLOps** (Machine Learning Operations).

EDUCATION

Superior School of Computer Science | [redacted] 2021 - 2025
*Bachelor of Science in **Artificial Intelligence Engineering** B.S.* *GPA 90/100*

- Relevant courses include Advanced Neural Networks, Natural Language Processing and Machine Learning.

MAJOR PROJECTS

Homecraft | *Python, Docker, Flet, Yolov8, Stable diffusion inpainting, NeRF, Gaussian Splatting* 2024 - 2025
A desktop application where users can create their own 3D models from personal bedrooms for editing.

- Collaboratively developing a desktop application compatible with Unreal Engine to edit 3D scenes generated from real-life environments from 2D images, constructed in a 3D scene through **NeRF and Gaussian Splatting methods;**
- **Segmented and inpainted** objects on **2D images** to separate and reconstruct individual objects and backgrounds within 3D scenes; Designed the **ML application through microservices.**

Capibara DOF | *Python, Regex, Langserve, Langchain, Pinecone, nltk* 2024
A web application for asking questions in natural language about the Mexican DOF.

- Collaboratively developed a **Retrieval Augmented Generation (RAG)** for a **Large Language Model (LLM)** to generate resumes and respond to natural language queries about the Mexican Official Diary of the Federation (DOF);
- **Used Langserve and Langchain** for model retrieval, and Pinecone for vector storage.

To check out more of my projects, please feel free to visit my own portfolio at PhilipSanM.github.io

EXTRACURRICULAR

[redacted] Competitive Programming Club 2022 - 2024

- ICPC 2023/2024 Grand Price of Mexico Ranked 256th out with **honorable mention**.
- Helping over 30 students with foundational knowledge to excel in competitive programming contests, covering topics such as recursion, backtracking, and dynamic programming.

SKILLS

LANGUAGES
Japanese(N5), English (Proficient), Spanish (Native).

PROGRAMMING LANGUAGES
Proficient: Python3, Typescript
Intermediate: SQL, Go

AWARDS
2nd Place Team at Chelathon, hackathon by Grupo Modelo (2023); Reduced CO2 emissions by the reuse of water and detected anomalies in pipes with DBSCAN ML model.

TECHNOLOGIES
Intermediate: Git, Gitlab, Azure, Docker, Jenkins.
Beginner: MLFlow, K8s.

LIBRARIES
Intermediate: Pandas, Numpy, Matplotlib, Seaborn, Tensorflow, Scikit-lean, React
Beginner: Transformers, TFX, FastAPI, Langchain, Smolagents

ONLINE COURSES
Hugging Face: AI Agents fundamentals (2025)
Cognizant: Cognizant GenAI Externship Nanodegree (2024)
Fine-Tuning to LLMs and RAG implementations.
Google Cloud: Computing Foundations Academy Certificate (2023).
Leetcode: Top 38.9% and Introduction to Pandas Badge (2023).
